- it has a beneficial effect on the development of the gastrointestinal tract,
- it has a beneficial effect on the health of calves,
- it facilitates excellent daily weight gains.

DENKavit Elektrolit (DENKacare Vitalfort)

DENKAVIT ELEKTROLIT (Denkacare Vitalfort) is a preparation used against diarrhoea in calves. It effectively prevents dehydration and the consequent loss of calves. Feed the calves with this drink for 1 to 2 days, 3 to 4 times a day, 1 to 1.5 litres per ration. In addition to normal feed, it can be used as an aid to maintain the water and electrolyte balance in the physiological digestion of calves, lambs, kids, piglets and foals.

DENKAVIT ELECTROLIT is used as a drink for cows immediately after giving birth and for all animals after moving into a new barn (stress).
